Objectives

- Identify common drug-drug interactions with HCV therapies

Major Drug-Drug Interactions for all Direct Acting Antivirals

- Carbamazepine
- Oxcarbazepine
- Phenytoin
- Phenobarbital
- Rifampin
- Expected to ↓ concentrations

- DO NOT USE WITH ANY HCV THERAPY!

Other Main Drug Interaction Concerns for DAAs

- Avoid amiodarone
 - Amiodarone with sofosbuvir and other DAA: Serious symptomatic bradycardia
- Avoid using amiodarone with any HCV therapy

DAAAs and Acid Suppressive Therapy

- Sofosbuvir/velpatasvir requires acidic environment for absorption
- Glecaprevir/pibrentasvir is less affected
- Recommend minimizing acid suppressive therapy in all patients undergoing HCV therapy
- **If a patient cannot stop PPI, use glecaprevir/pibrentasvir**

Statins and HCV Therapy

- Interactions vary by DAA and statin
- General guidance: Hold statin while on HCV therapy

Other Considerations

- 
- In patients undergoing HCV therapy
 - Avoid herbals
 - Avoid supplements
 - Avoid >20 mcg ethinyl estradiol with glecaprevir/pibrentasvir
 - In patients **with cirrhosis**
 - Avoid NSAIDs
 - Acetaminophen preferred for short-term pain management at <2 grams per day

Other Considerations
